Introduction

In today's fast-paced world, staying organized is essential for personal and professional success. With numerous tasks and commitments to juggle, individuals often find themselves overwhelmed by the sheer volume of things to remember and accomplish. Fortunately, technology provides us with tools to manage our tasks efficiently. One such tool is a To-Do app, a digital task manager designed to help users organize their activities, prioritize tasks, and stay on track with their goals.

Problem Definition

Despite the abundance of To-Do apps in the market, there remains a need for a customizable, platform-independent solution that caters to the specific preferences and requirements of users. Many existing apps may not offer the flexibility or personalization desired by individuals, leading to dissatisfaction and inefficiency in task management. Additionally, for beginners in mobile app development, there is a lack of resources that provide hands-on experience in building real-world applications.

Aims and Objectives

The scope of the project involves designing and implementing a feature-rich To-Do app using Flutter that addresses the shortcomings of existing solutions while providing a seamless user experience. Key features to be included in the app may encompass:

- Creating Categories: Organize our tasks by creating categories that make sense to us.
- Creating Tasks in Categories: Add tasks within categories for a structured approach.
- Sorting of Tasks: Easily categorize your tasks as completed or unfulfilled.
- Category Archiving: Keep your workspace clean by archiving categories.

- View Statistics: Gain insights into your productivity with task statistics.
- View Tasks by Day: Stay on top of daily tasks and deadlines.
- Editing: Make changes to our tasks with ease.
- Notifications: Receive reminders to never miss an important task.

Requirements of the system (Hardware)

Development Machine:

1. Processor: Intel Core i5 or better (or and Android
1. Screen Resolution: Supports resolutions for compatibility across various devices. various resolutions for compatibility across devices equivalent)
1. RAM: 8 GB minimum, 16 GB recommended
1. Storage: At least 10 GB of free space for the development environment, dependencies, and project files
1. Internet Connection:

User Devices:

- 1.Mobile Devices:Compatible with modern ios
- 2.Screen Resolution:Supports various

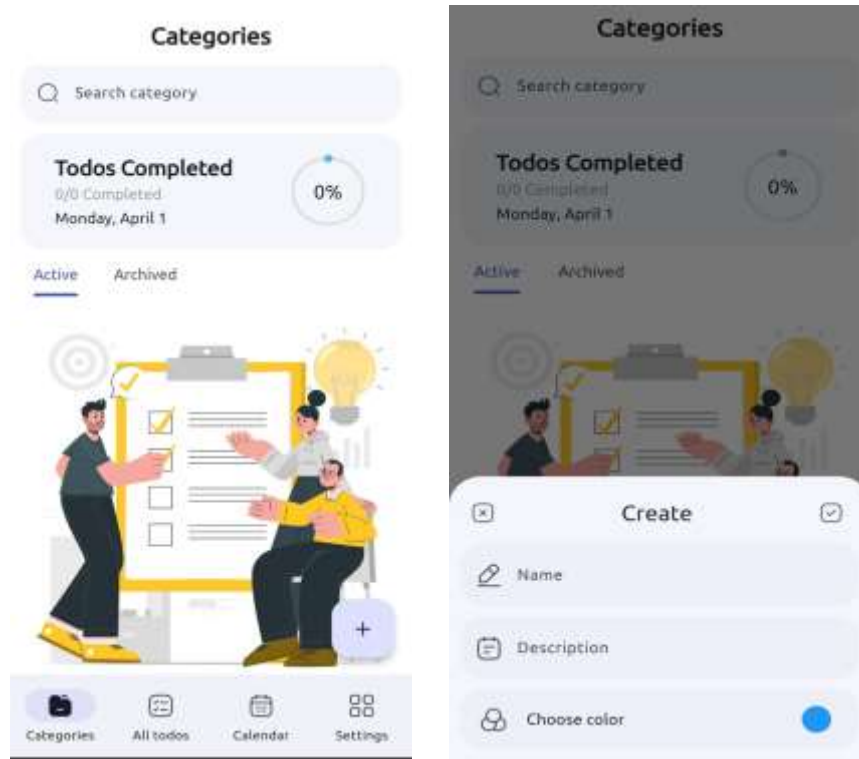

Requirements of the system (Software)

Development Environment:

- Flutter SDK
- Dart
- Android Studio IDE
- Android emulator
- Git

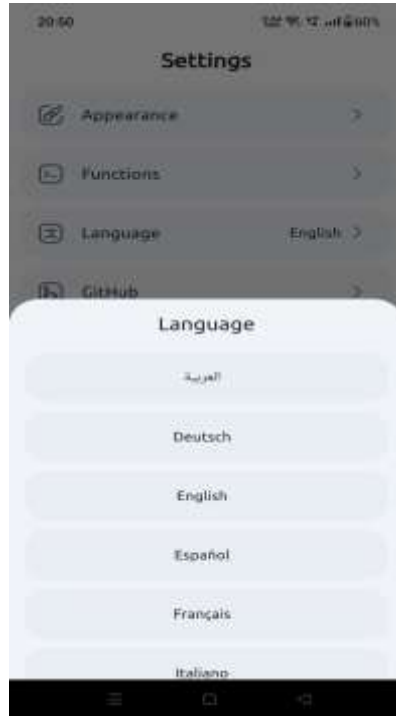

Firebase

Implementation : Creation of Task

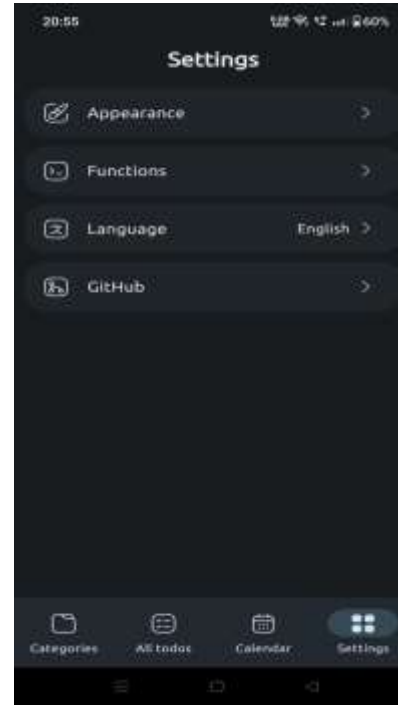

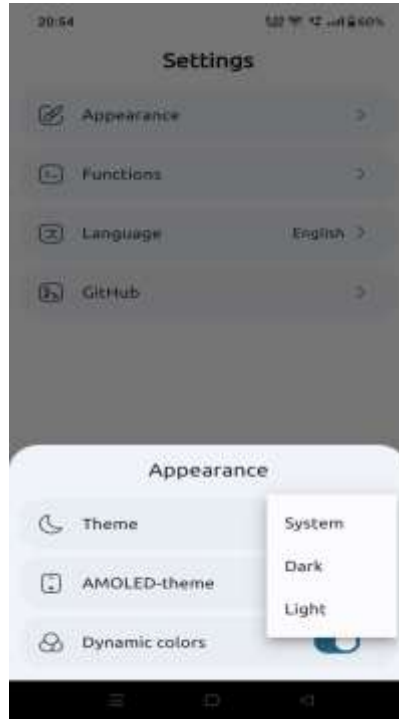

Inorder to add the task the user has to click on the Plus Button in the First Image and after clicking on that user will get the option to create his task .Where the user can add the name,description of the task.

Language Feature

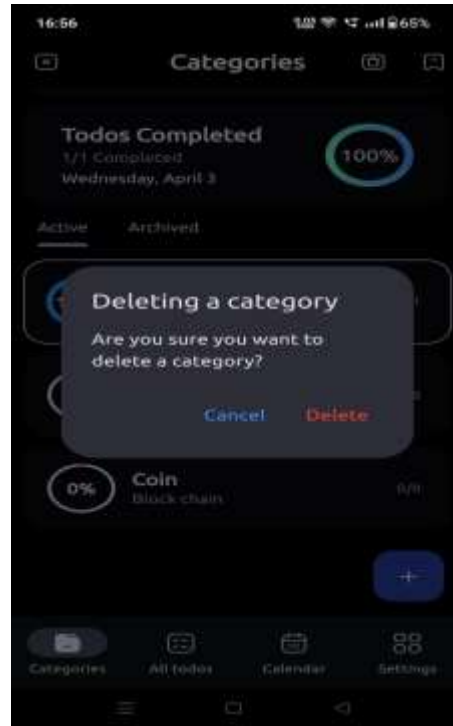

After clicking on "Language" and selecting a language from the dropdown menu, the user can apply the changes.

Change in Appearance

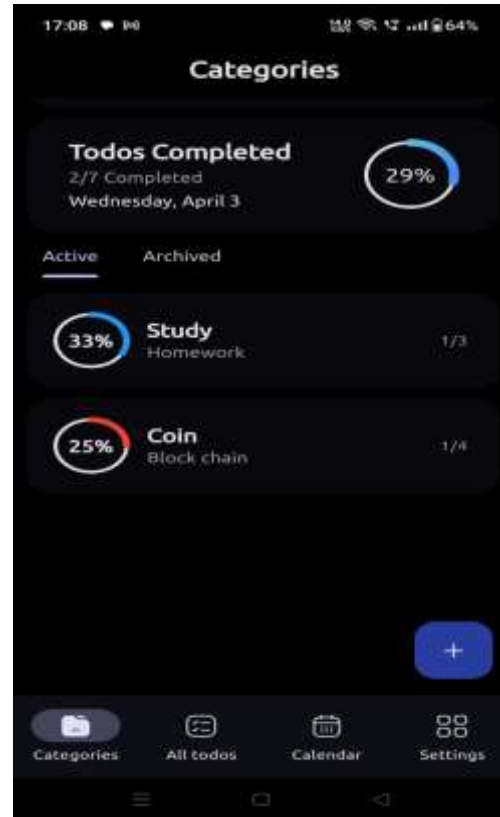

The user can modify the app's appearance by navigating to the settings section and selecting "Appearance." Upon clicking, a drop down menu will appear, allowing the user to change the theme.

Deletion of Task

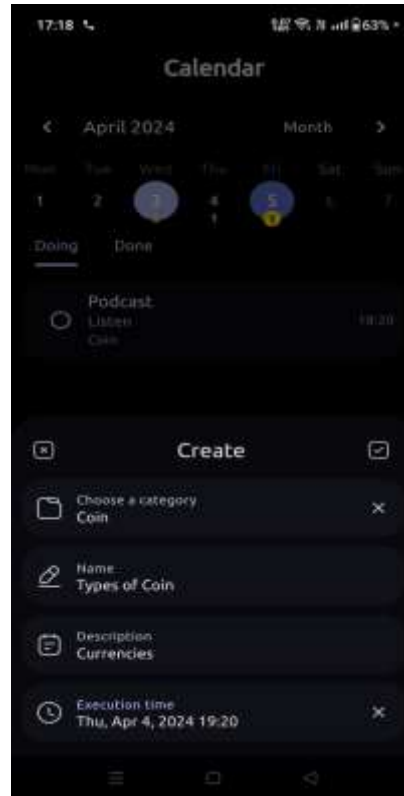

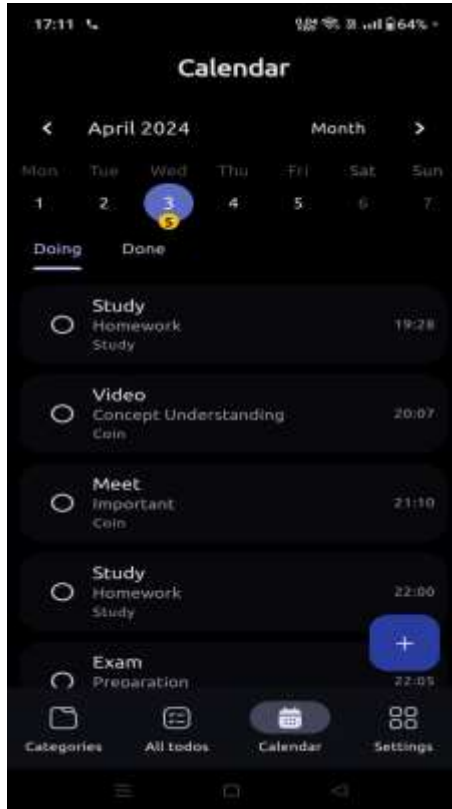

Once a specific task has been completed, the user can click on it. Then, they can navigate to the top right corner, near the categories, and select the delete button to remove the task.

Work completion percentage?

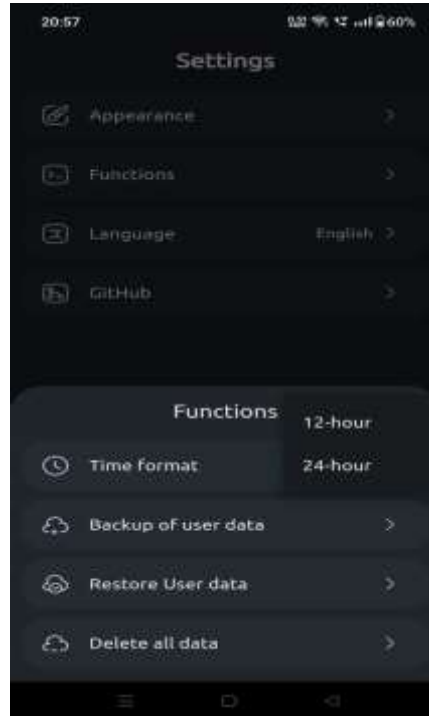

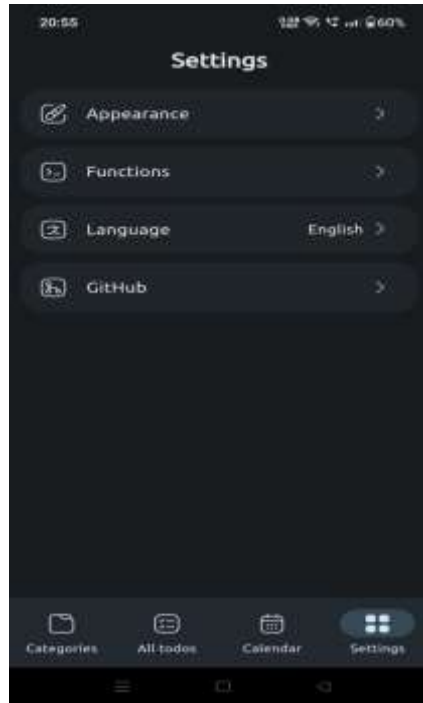

Calendar View and Execution Time

Upon accessing the calendar view, users can easily review tasks sorted by dates and conveniently edit their execution times as needed.

Changing Time Format

Users can customize the time format to suit their preferences, choosing between either 12 or 24-hour formats.

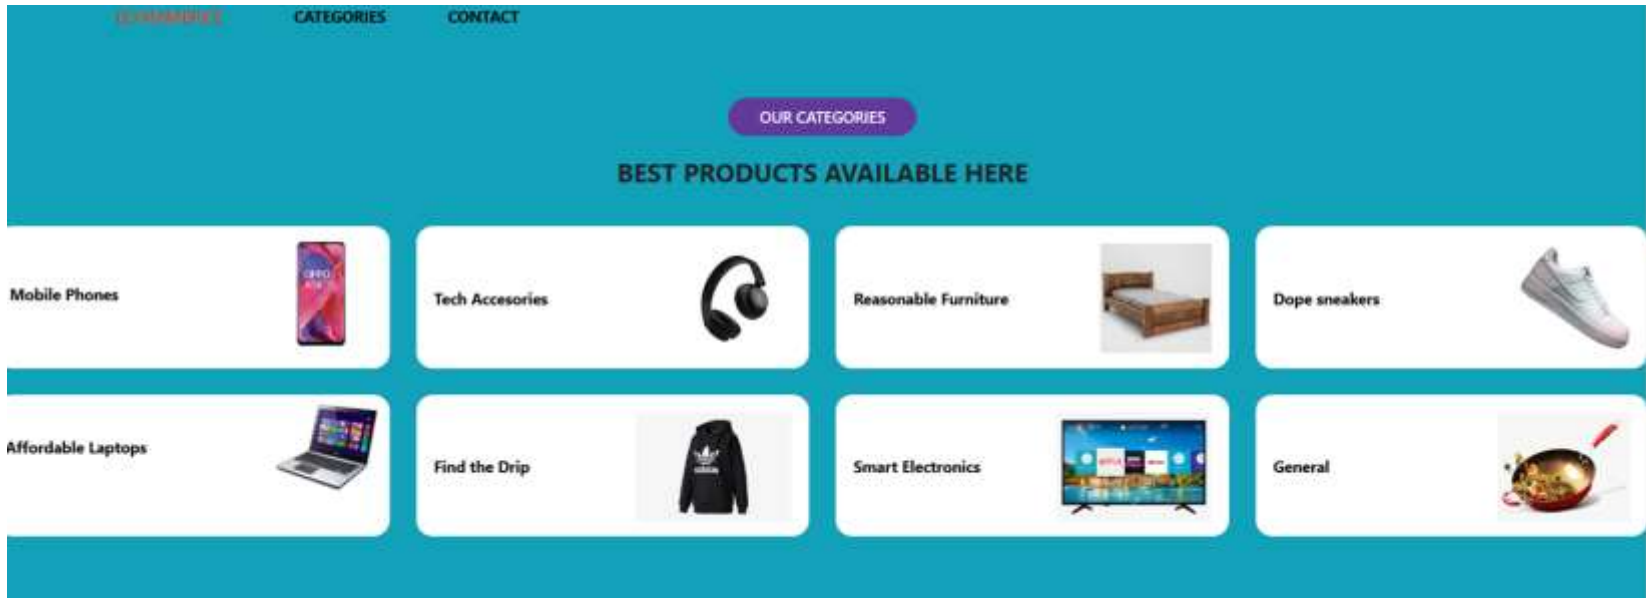

Conclusion

To-Do app is tailored to empower users in managing tasks effortlessly. Through intuitive features like calendar view and task editing, we've prioritized user convenience, aiming to enhance productivity seamlessly. Your feedback and usage are invaluable as we continuously refine and enrich our app to better serve your needs. Thank you for entrusting us with simplifying your task management and helping you achieve your goals effectively.

Introduction PWA

Service Worker

The image shows a web application with a teal background and a grid of product categories. The categories are: Mobile Phones, Tech Accessories, Reasonable Furniture, Dope sneakers, Affordable Laptops, Find the Drip, Smart Electronics, and General. The application is titled 'OUR CATEGORIES' and 'BEST PRODUCTS AVAILABLE HERE'.

On the right side, there is a service worker interface. The 'Service workers' section shows two workers:

- http://127.0.0.1:5500/PWA%20_Final/**
 - Source: [src.js](#)
 - Received: 31/3/2024, 3:24:18 pm
 - Status: #638 activated and is stopped
 - Push: Test push message from DevTools
 - Sync: test-tag-from-devtools
 - Periodic Sync: test-tag-from-devtools
 - Update Cycle: Version, Update Activity, Time
- http://127.0.0.1:5500/**
 - Source: [src.js](#)
 - Received: 25/3/2024, 11:03:57 pm
 - Status: #630 activated and is running
 - Clients: [http://127.0.0.1:5500/index.html](#)

The 'Background services' section lists various services:

- Back/forward cache
- Background fetch
- Background sync
- Bounce tracking mitigation
- Notifications
- Payment handler
- Periodic background sync
- Speculative loads
- Push messaging
- Reporting API

The 'Frames' section shows a single frame: [top](#).

Cache Files

The image shows a web application on the left and the Chrome DevTools Application tab on the right. The web application has a teal header with 'ELECTRONICS' and a menu icon. Below the header is a purple button labeled 'OUR CATEGORIES'. The main content area is titled 'BEST PRODUCTS AVAILABLE HERE' and features three product categories: 'Mobile Phones' with a smartphone image, 'Tech Accessories' with a headset image, and 'Reasonable Furniture' with a bed image. The Chrome DevTools Application tab is open to the 'Storage' section, specifically the 'Cache storage' sub-section. It shows a list of cached resources for the origin 'http://localhost:3000'. The table lists 7 entries, including bootstrap CSS files, jQuery, font-awesome CSS, and various image files. The 'Name' column shows the full path to the cached file, and the 'Response' column indicates the content type (e.g., 'text/css', 'image/jpeg').
